3. Create and/or rename Project – You could do this per module or per assignment or have general links you use across all your work

4. Click on the green create new reference bottom.

5. You can search for websites, books, journals etc. It might be best to already know what you're going to search for because MyBib is for creating references rather than finding appropriate sources. Good thing years MyBib will flag the sources credibility – click on the reference to add it to your project.

6. MyBib will allow you to edit and amend – you will need to update the date accessed by just clicking on TODAY next to that entry

7. Your reference will now appear in your project

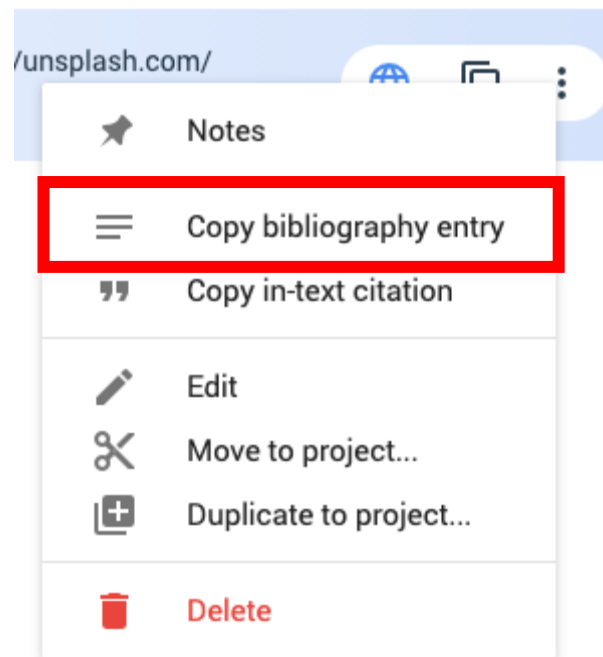

8. You can copy an and InTEXT citation (SMITH 2020) and then paste that in your work

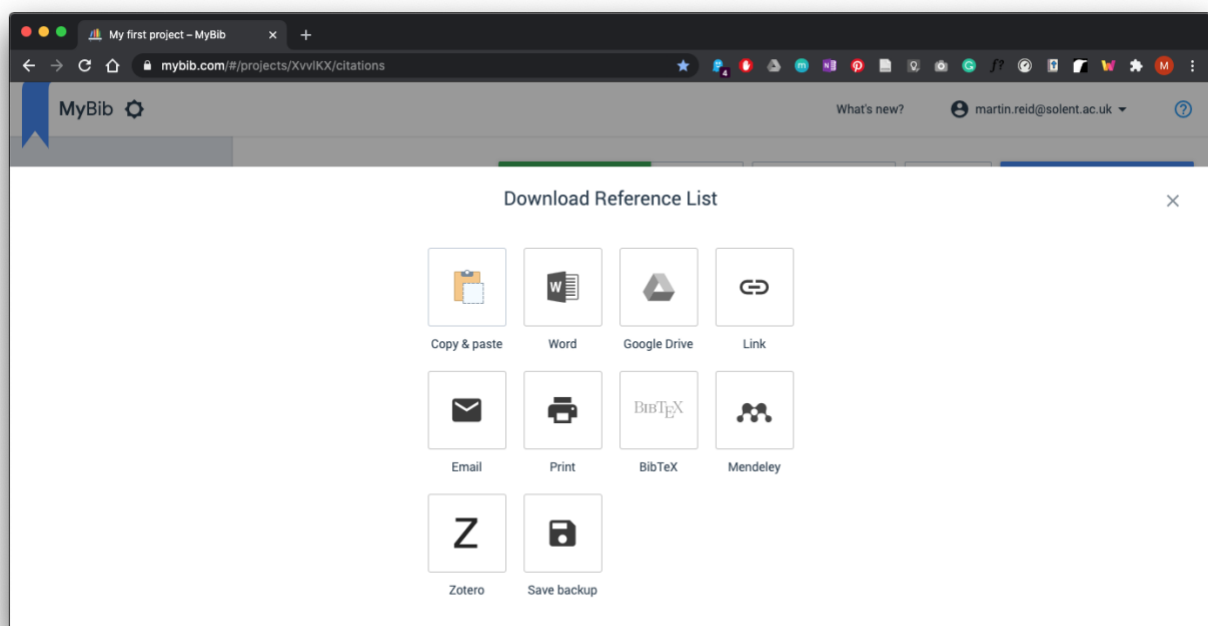

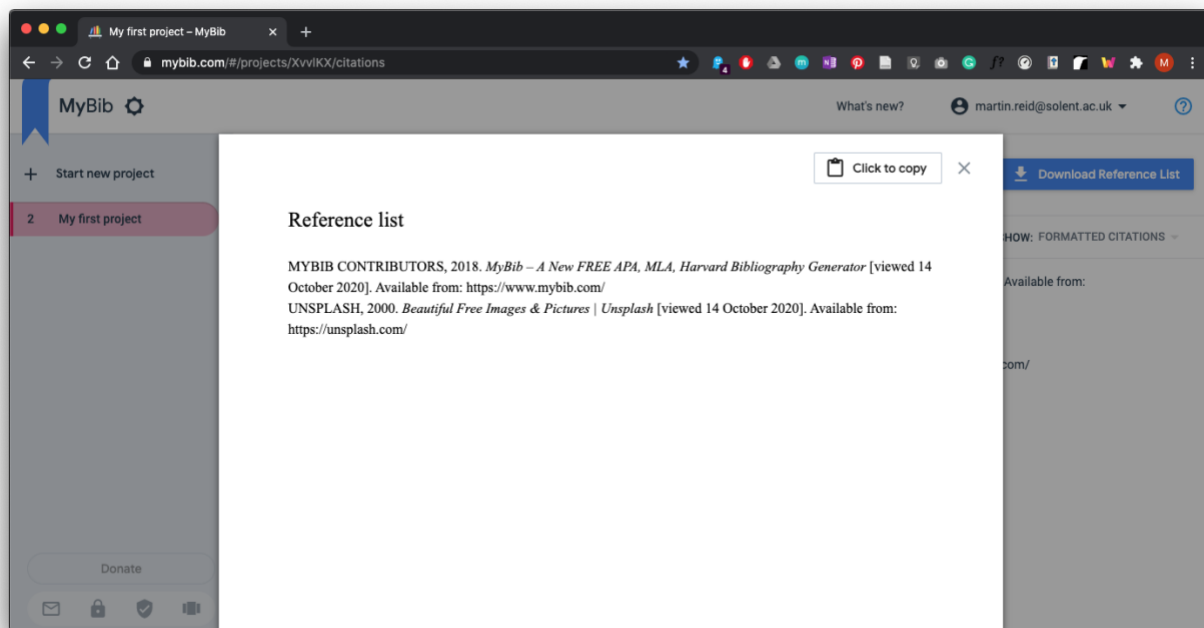

9. You can also copy a bibliography entry which creates the full reference list item.

Also know that you can add notes edit move to a project and also duplicate your project

10. The copy function will give you a number of options copy paste might be good for just one reference that you can cut-and-paste in a presentation or word for a longer list of references

11. My bib plug-in for Google Chrome this is a good way of just capturing references from a website or an online journal/research paper that you can then send to your My Bib database.
